

MOULD - CLEANER 300/132

The Mould-Cleaner 300/132 can be applied as follows:

1. Poor soiled moulds can be cleaned directly on the machine as follows: the mould-cleaner has to be applied into the moulds by means of a brush and is allowed to react for about 15 minutes. After this the moulds are treated with a dry cloth and blown with compressed air until they are dry.

2. Very soiled moulds have to be taken out of the machine and put into a container, filled with Mould-Cleaner 300/132. The cleaner is allowed to react for about 1-2 hours, then the moulds are taken out of the bath, treated with a dry cloth and blown with compressed air until they are dry. This cleansing process should only be effected with moulds made of metal, not with moulds manufactured from synthetic resin as this treatment might cause damage to the synthetic resin moulds.

A longer effect to iron is not recommended as it leads to oxidation (rust).
