

SIP-SOL WM 1 7006

**SIP-SOL WM 1 is a water-based agent that contains surface active agents.
SIP-SOL WM 1 is used as leather softener and as water-based cleaner.**

Application : SIP-SOL is used for pre-treatment of upper-leather uppers prior to the last Procedure especially in the toe puff area and for conditioning of cuttings prior to crimping. SIP-SOL can also be used as a water-based cleaner, for example in order to remove water-based adhesive or finish residues or to clean the leathers prior to application of water-based finish products.

Advantages :

- Makes leather extensible and pliable
- Avoids grain scratches
- Versatile use

Processing technique :

- **As leather softener**

The product is especially suitable for use in the toe mulling apparatus and has to be filled into the corresponding water container. If used in this way, in most cases the treatment of the uppers by means of a sponge or spray application, that has to be made before, can be avoided. In special cases it is suitable to apply SIP-SOL WM 1 by means of a sponge or by spraying before stretching of the uppers in order to avoid scratches or split of the leather. For sensitive leathers it can be useful to apply the SIP-SOL WM 1 either manual or also in a heat setter device.

- **As cleaner before finish application**

Moisten a soft cloth with SIP-SOL WM 1, cloth should not be soaked with the cleaner. Wipe the corresponding leathers in circular moves. Depending on the soiling the cloths have to be changed right in time.

Storage : Cool and dry, not below 5°C

2019
