### JOINT SEALING AGENT 913/5

#### **Technical Data:**

Viscosity: approximately 300 mPas

#### **Processing :**

The Joint Sealing Agent 913/5 was developed in order to seal the joints at the upper. The Joint Sealer 913/5 has to be applied by means of an adhesive application unit or by hand with a brush from the outside onto the joints at the upper. Before further processing the uppers have to dry for at least 6 hours , best over night.

The information contained herein is based on our technical knowledge and experience. Since it is the user's responsibility to determine the suitability of the product for his own use, he should thoroughly test any application. In the bounds of our delivery terms we grant constant quality.
